

Next-Generation HOA Security The Blended Aerial-Ground Solution

"Proactive Community Defense Through Autonomous Innovation"

**Your perimeter doesn't end at the gate.
Neither does ours.**

**ENHANCED
PATROL**

Enhanced Patrol delivers a fully managed aerial-ground security program for gated communities and HOAs — persistent overwatch, zero blind spots, and a single FAA-certified remote pilot covering up to six properties simultaneously.

FAA NATIONWIDE WAIVER HELD

THE PROBLEM WITH TRADITIONAL HOA SECURITY

Blind Spots Everywhere

Fixed cameras miss wooded perimeters, golf course borders, and remote cul-de-sacs where trespassing and vehicle break-ins actually occur.

Massive CapEx, Low Coverage

Trenching, asphalt cutting, and light-pole mounting across miles of community road costs six figures — and still leaves gaps a single aerial asset eliminates.

Information Lag = Suspects Gone

Ground patrols navigating speed limits and gate codes arrive after incidents. Traditional security is reactive by design. Aerial overwatch is not.

TURNKEY AERIAL-GROUND PROGRAM

- › Persistent overwatch via autonomous or remotely piloted UAS
- › HD and thermal live feeds to your SOC or management mobile
- › AI anomaly detection — unauthorized access, loitering, hazard flags
- › License plate recognition (LPR) and person/vehicle tracking
- › Contractor verification and time-stamped QA documentation
- › Edge-based AI privacy masking — resident areas blurred in real time
- › All FAA compliance and BVLOS waiver management handled by Enhanced Patrol

WHY ENHANCED PATROL

FAA Nationwide BVLOS Waiver — 1:6 ratio

One of fewer than a handful of operators nationwide. One pilot covers six sites simultaneously, driving per-site costs down dramatically vs. traditional guarding.

Zero friction for your management team

Fully managed — staffing, maintenance, regulatory, AI training. Your guards stay focused on resident engagement. We handle the airspace.

● Litigation protection built in

Daily patrols flag slip-and-fall hazards and contractor non-performance before they become claims. Time-stamped footage is indisputable record.

Hardware-agnostic DaaS platform

No vendor lock-in. As drone capabilities advance, your stack upgrades without rip-and-replace capital cycles or SOP rewrites.

● Scale supervisory capacity

Managers can oversee 40–50 sites with fewer on-site visits, reducing travel and FTE requirements across your portfolio.

DEPLOYMENT OPTIONS

OPTION A

Tactical Deployment — Peak Activity & Event Windows

- › On-site staff cross-trained to launch; remote RPIC executes mission
- › 45–50 min continuous flight per deployment
- › No infrastructure footprint required
- › Ideal for peak hours, holidays, rapid incident response

OPTION B

Automated Docking Station — 24/7 Community Protection

- › Ruggedized weatherproof dock at strategic vantage point
- › Automated battery swap — mission-ready in minutes, 24/7/365
- › Zero on-site personnel needed for launch or recovery
- › Ideal for continuous perimeter integrity and overnight coverage

PROGRAM LEADERSHIP

Anthony Caudle

FOUNDER & CEO

30+ years in law enforcement, military, and executive protection. 12 years Tennessee's Governor's Executive Protection Unit; primary liaison to the U.S. Secret Service. U.S. Army veteran—JRTC Opposing Force reconnaissance team leader.

Jonathan Frith

DIRECTOR OF UAS PROGRAMS

USMC Infantry veteran. Former MNPd narcotics detective and DEA task force. FAA Nationwide BVLOS Waiver holder (1:6 multi-drone) and Part 107 certified. Architect of DFR programs, automated patrol networks, and national risk platforms for multi-site commercial clients.
